

Applicant: Shanghai Dacheng RC Model Co., Ltd.
FCC ID: XY4RZT24G

Operation Description

The Control Signal of button input to MCU of transmitter, which convert to digital signal though ADC then pass to RF module, RF module circuit carry wave though GFSK mode then amplified by RF power amplifier circuit unit, at last through the antenna then transmit out with frequency of 2405-2445MHz.

Device is equipped with unique antenna. Common grounding on PCB is not connected to real external ground. Power supply is DC 12V by eight “AA” batteries.
